v-lang Documentation

Release 0.1

Vegard Nossum

Contents

Contents

1.1 Tutorial

1.1.1 Building the compiler/interpreter

Clone the repository from GitHub:

```
git clone https://github.com/vegard/v.git
```

Build the project:

```
./make.sh
```

That should be it! You can now run `./v` in the current directory to start the compiler.

1.1.2 Hello world

Create a file called `helloworld.v` containing a single line:

```
print "Hello world!"
```

To run this program in the interpreter, run:

```
./v helloworld.v
```
